September 2023 Sighting

Military test range · 3 FD-302 witness interviews · Composite sketch

Incident Summary

- September 2023 morning (~7:15–9:00 AM)
- Restricted military test range, United States
- Convoy of 3 vehicles departing for LiDAR testing
- Lead witness had personally restricted airspace for the day's operations

The Object

- Cigar / linear shaped
- Metallic bronze (or gray) body
- No wings, no exhaust, completely silent
- Length: 1–3 Blackhawk helicopters
- Extremely bright "diamond white" light on one end
 - "like looking into the sun"
- Visible 5–10 seconds, then vanished instantly
 - no contrails, clear sky

Witness Profile

Serial 4 — Lead Witness (Female, Agency Employee):

- ~15 years experience at the test range
- Had seen most US military aircraft and drones
- "Never seen anything like this"
- "Felt it left when it saw them"
- Co-workers ridiculed her for reporting

Serial 3 — Passenger, First Vehicle:

- Saw bright white light, stationary → moved right
- Estimated 10–20 miles away, visible ~10 seconds
- Initially thought meteor, changed mind after others confirmed

Serial 5 — Contractor, Second Vehicle:

- 10–15 hours drone pilot experience
- "Definitely bigger than a drone" — smaller than 737
- "Light was bright enough to see bands within the light"
- "Freaked out" — trouble sleeping for 2 nights

EMI Hint & the Cost of Reporting

Security gate malfunction · "Would not have reported if alone"

Gate Malfunction — Electromagnetic Interference?

- Immediately before the sighting, the security gate at the test range malfunctioned:
 - Opened slightly and closed 3 times
 - Functioned normally on the 4th attempt
 - No prior or subsequent operational issues reported
- This is consistent with reported UAP-associated electromagnetic interference (EMI) effects:
 - Vehicle ignition failures
 - Radio/communications disruption
 - Electronic equipment malfunction
- The gate malfunction + sudden appearance of a silent, bright, metallic object within seconds is a compelling temporal correlation
- Also noted in Track B (D62): lost-link/EMI events alongside UAP observation in Strait of Hormuz

The Stigma Barrier

These witness accounts reveal the human cost of UAP reporting within government/military circles:

Serial 4 (Lead Witness):

- "Would not have reported the object if she had seen it by herself"
- Co-workers subsequently "made fun of her" for reporting the sighting
- In 15 years at the range, had seen most US military aircraft — but this was different

Serial 5 (Drone Pilot):

- "Freaked out" by the experience
- Had "weird dreams and trouble sleeping for two nights" afterward
- That night: storm knocked out hotel TV — went downstairs to verify all TVs were out, not just his — heightened vigilance/anxiety

Despite multiple credible witnesses with domain expertise, reporting came with professional and psychological consequences.

Photo Series B — Late 2025 Sensor Feed

24 frames · Western United States · FLIR / targeting pod imagery

Imagery Characteristics

- 24 frames (B1–B24) from military sensor system
- Grainy black-and-white targeting/sensor camera feed
- Crosshair reticle with horizontal scale:
15 | 10 | 5 | 0 | 5 | 10 | 15
- Heavily redacted — black bars obscure instrumentation labels, coordinates, metadata
- Timestamps show "12/31/99" — likely default or placeholder date, not real
- Small, dark objects visible near or within the crosshair in most frames
- Consistent with infrared or low-light targeting pod (e.g., FLIR) common to military aircraft

Temporal Sequence

B6–B12 (18:10:00–18:11:12):

- Single dark object near crosshair center
- B7 notes object is "possibly a helicopter" — but this is model interpretation, not confirmed

B1–B5, B10–B12 (18:11:27–18:12:20):

- Single object, varying positions
- B2 shows "faint terrain/mountains near lower edge"

B13–B18 (18:19:54–18:21:02):

- TWO small, dark circular objects visible in B14, B15
- B18 crosshair labeled "3"

Operational significance: dual-object frames suggest this is operational sensor tracking, not a training exercise. Without de-redacted metadata (altitude, range, kinematics), objects could be anything from birds/drones to genuinely anomalous targets.

Photo Series A & Evidence Summary

8 additional images · No extractable text · Cross-track evidence comparison

Photo Series A — Late 2025 (8 Images)

- 8 frames (A1–A8), PNG format
- No page-level transcriptions — image-only files
- No extractable text: no dates, locations, or descriptive metadata available
- Visual analysis of the PNGs would be required
- May show same or different objects, different sensor types, or different incidents entirely

Release Pathway Note:

Both incidents released under war.gov portal, not vault.fbi.gov. Suggests DoD disclosure pipeline rather than standard FBI FOIA — implying interagency coordination on UAP transparency.

Evidence Summary — September 2023 Sighting

Present:

- ✓ 3 FD-302 witness interviews (Serials 3–5)
- ✓ Composite sketch (generated Apr 30, 2024)
- ✓ Consistent physical description across witnesses
- ✓ Gate malfunction correlation (possible EMI)

Absent:

- ✗ Photos or video (none taken by witnesses)
- ✗ Radar / sensor data (not mentioned in any serial)
- ✗ Physical evidence
- ✗ Unredacted names, locations, exact date

Photo Series A+B — Late 2025:

- ✓ 32 total frames across two series
- ✗ No extractable text from Series A at all
- ✗ Placeholder timestamps (12/31/99) in Series B
- ✗ Heavily redacted instrumentation data

Conclusions & Open Questions

What We Now Know

- ✓ 3 experienced military contractors independently corroborated a cigar-shaped, metallic, silent object with an intensely bright light on one end
- ✓ Physical description converges: 1–3 Blackhawk length, bronze/gray, no wings/exhaust, vanished instantly
- ✓ Security gate malfunctioned immediately before sighting — consistent with UAP-associated EMI
- ✓ Lead witness with 15 years range experience stated she had "never seen anything like this"
- ✓ Reporting came with professional consequences (ridicule) and psychological impact (sleep loss)
- ✓ 32 sensor frames from Late 2025 suggest ongoing military UAP tracking with FLIR/targeting systems

Open Questions

- ? What are the redacted details? Names, exact location, date, unit designations — all blacked out
- ? Is there radar or sensor corroboration for the September 2023 sighting? Test range should have coverage
- ? What does the composite sketch depict? No description of what the artist rendered exists in the text
- ? Are Photo Series B timestamps real? 12/31/99 is almost certainly a default — true date unknown
- ? What's in Photo Series A? 8 PNGs with zero extractable text — requires visual inspection
- ? Why war.gov release instead of FBI vault? Suggests DoD interagency coordination on UAP transparency

Data Sources — Track F Files

36 contemporary FBI files · 2023–2025

FD-302 Serial 3

Passenger, first vehicle — bright white light, estimated 10–20 miles away

FD-302 Serial 4

Lead witness, 15 yrs experience — cigar-shaped, metallic bronze, silent

FD-302 Serial 5

Drone pilot, second vehicle — "definitely bigger than a drone," sleep disruption

Composite Sketch

Generated April 30, 2024 — image only, no descriptive annotation in text

Photo Series A (8 frames)

Late 2025 — PNG format, zero extractable text, location unspecified

Photo Series B (24 frames)

Late 2025 — FLIR/targeting pod, Western US, dual-object frames B14/B15
