

PURSUE Release 01

U.S. Government UAP Files · Executive Summary

Analysis of 161 files · 6 agencies · 7 tracks · 1944–2025

Personal research project designed by Joe, powered by Hermes Agent, DeepSeek v4 Pro & GPT-5.5 · 2026

What We Analyzed

161 source files across 6 agencies, 7 analysis tracks

A	A — Birth of the Phenomenon	7 files, 750+ pages, 4,000+ OCR	15 slides
B	B — Military Mission Reports	41 files, 532 OCR pages	11 slides
B	B — Video Appendix	15 videos, 303 frames	25 slides
C	C — Astronaut Testimony	12 files, 121 OCR pages	9 slides
D	D — FBI Case File	20 files, 2,638 OCR pages	9 slides
E	E — Diplomatic Cables	7 files, 32 OCR pages	8 slides
F	F — Contemporary FBI	36 files, 32 pages (PDFs + images)	7 slides

All source PDFs, OCR pages, and video clips retained for auditability at war.gov/UFO

80 Years of UAP Documentation

1944–2025: from WWII foo fighters to contemporary FBI investigations

1944–45 WWII Foo Fighters

415th Night Fighter Squadron reports glowing orbs over Europe

1947 Arnold Sighting / FBI Opens File

FBI creates 62-HQ-83894 within days; Twining Memo: "something to this"

1948–49 Project Sign → Grudge

Active investigation pivots to institutional closure by 1949

1965–72 Astronaut Era

Gemini 7, Apollo 11/12/17 crew observations; met with silence

1999 COMETA Report

French military analysts call ET hypothesis "best scientific explanation"

2016–25 Modern Military Encounters

7 theaters, EMI correlation, trans-medium concerns, standardized reporting

2023–25 Contemporary FBI

Multi-witness events, credible LEOs, documented stigma against reporting

May 2026 PURSUE Release 01

161 files declassified under Presidential transparency directive

The Early Response

Tracks A + D · the government took UAP seriously — then deliberately disengaged

Track A — 1944–1949

- Foo Fighters (1944–45): 415th NFS pilots report glowing orbs tracking Allied bombers — direct precursor to post-war investigations.
- Kenneth Arnold (1947): widely-sighted flying discs trigger military intelligence response within weeks.
- Twining Memo (1947): "the phenomenon is something real and not visionary or fictitious" — AMC intelligence confirms.
- Project Sign → Project Grudge (1948–49): active investigation pivots to "nothing to see here" framing.
- ~35% of ~233 incident summaries remain unexplained.

Track D — FBI Case File

- FBI created file 62-HQ-83894 within days of Arnold sighting.
- 2,638 pages spanning 1947–1968 — the single largest file in PURSUE Release 01.
- A-2 intelligence confirmed: "there's something to this."
- Active investigation phase lasted only ~2 years before the FBI pivoted to passive citizen mail management by 1949.
- UAP was treated as a security concern, not a scientific one.

Pattern: initial seriousness, then deliberate closure.

The Operational Reality

Track B + Video · military encounters never stopped

Track B — 41 Mission Reports (2016–2025)

- 7 geographic theaters, ~28 unique reports (30% duplicates).
- EMI-UAP correlation confirmed: D62 lost-link events (11min + 27min) alongside UAP observation — Strait of Hormuz.
- Trans-medium concern: D64 explicitly scanned for UUVs (underwater vehicles) alongside aerial UAP.
- COLD thermal signatures (D23, UAE) — inconsistent with conventional hot-exhaust propulsion.
- Diamond-shaped SWIR-only object, ~500 mph (D25, Greece).
- Top incident: Western US (7 federal LEOs, 4 incidents, partially transparent kite-shaped object blocking spotlight).

Video Appendix — 15 DVIDS Videos

- 12 original downloads + 3 externally highlighted (PR38, PR46, PR28) identified via Gizmodo/India Today/Metabunk.
- PR38 (Middle East 2013): eight-pointed star + visible trail — strongest single visual in the release (likely flare/bloom).
- PR46 (INDOPACOM 2024): football body + projections; inverted view suggests aerostat silhouette possibility.
- PR28 (Greece 2024): SWIR-only, diamond/teardrop, 434 kt.
- PR34 (Greece 2023): reported 90° turns at ~80 mph — but motion playback required; still frames are insufficient.
- GPT-5.5 vision analysis confirmed: footage is strongest as sensor-behavior evidence, not resolved object proof.

The Human Dimension

Tracks C + E + F · astronauts saw things, diplomats had no plan, the stigma is real

Track C

Astronaut Testimony

- Gemini 7 (1965): Borman reports "bogey" — transcript shows crossed-out "round vehicle" text edited before public release.
- Apollo 12: Bean observes 6 bright objects; met with bare "Roger" from CAPCOM.
- Apollo 17: Cernan's "train headlight" + VM6 photo — anomaly flagged by analysis.
- Skylab data corrupted / mislabeled.
- COMETA Report (1999): French military "ET best explanation" — delivered to NASA Administrator.

Track E

Diplomatic Cables

- 1963 Hunter Memo: State Dept told U.S. had "no alien contact policy" and would inevitably "be caught with our pants down."
- Kazakhstan 1994: Tajik Air pilots 40-min UFO encounter, photos taken — Embassy response: "no opinion."
- PNG 1985: Air Niugini pilot radar contact; USG denies any aircraft in PNG airspace.
- USPER Statement (2025): SECRET//NOFORN — senior intel officials witness 65-min multi-orb pursuit; most compelling contemporary cable.

Track F

Contemporary FBI

- Sep 2023: 3 independent FD-302 interviews with consistent descriptions — cigar-shaped, metallic, silent hover, "vanished."
- Witness 3: female supervisor, 15yr veteran — felt object "left when it saw them."
- Witness 1 had documented psychological impact — FBI explicitly recorded it.
- Stigma against reporting UAP is real and explicitly documented in FBI records.
- Photo Series B: 24 targeting pod captures (Sniper/Litening/ATFLIR-class sensors).
- Photo Series A: 8 PNG images — visual inspection deferred (no vision model access).

Video Evidence — Highlights

The clips external viewers actually noticed; curated from 15 DVIDS videos

PR38 — Middle East 2013 · eight-pointed star + visible trail (strongest single visual)

Top 3 Highlights

- 1. PR38 — Stunning thermal bloom with visible trail; likely flare/bloom, not literal "star-shaped craft."**
- 2. PR46 — Football body + projections; inverted view shows possible aerostat/tethered-balloon silhouette.**
- 3. PR28 — SWIR-only teardrop/loss sequence; diamond claim is weak in stills, but sensor-modality evidence is genuine.**

Companion MP4s available in release package.

Video Evidence — What We Learned

15 videos analyzed with GPT-5.5; sensor-behavior evidence > object proof

Sensor behavior is the strongest evidence.

Reticles, zooms, contrast filters, lock loss, reacquisition, and modality switches tell a clearer story than object morphology.

The most viral clip is likely a flare.

PR38's "eight-pointed star" is thermal/optical blooming, not object geometry. India Today's flare explanation is visually plausible.

Shape claims need cautious framing.

PR46's "three projections" are partially visible but ambiguous. Inverted aerostat comparison is a plausibility test, not identification.

Kinematic claims require motion.

PR34's reported 90° turns at ~80 mph cannot be assessed from still frames. Motion playback + sensor metadata are essential.

Visually interesting ≠ more anomalous.

The strongest visuals are also the best candidates for prosaic explanations: flare bloom, aerostat silhouette, sensor-mode loss, kinematic ambiguity.

Cross-Cutting Patterns

What repeats across 80 years of U.S. government UAP documentation

Initial Seriousness → Institutional Closure

1947: FBI opens file, A-2 confirms reality → 1949: Grudge closes the file.
1960s: astronauts see things → CAPCOM silence. Same pattern repeats.

Credible Witnesses → Official Silence

7 federal LEOs (2023). 3 consistent FBI witness interviews (2023).
Apollo crews. Tajik Air pilots. Embassy response: "no opinion."

Sensor Data Outruns Visual Proof

41 mission reports with structured data, EMI correlations, COLD thermal signatures — but 15 videos show only tiny contrast areas and sensor artifacts.

Reporting Evolution = Bureaucratic Maturation

2016 free-text → 2023 40+ parameter structured forms. The military learned to collect data systematically, not explain it.

Stigma Is Explicitly Documented

FBI records show psychological impact on witnesses. "People don't report because they don't want to be laughed at." This is now in the file.

The Arc of 80 Years

1944–45: Foo fighters over Europe. Pilots report, no one knows what they are.

1947: Arnold sighting. Public interest explodes.
FBI opens case. Military intelligence confirms.

1948–49: Project Sign → Grudge. The door closes.
Institutional verdict: nothing to see here.

1965–2001: Astronauts see things. CAPCOM:
"Roger." COMETA: "ET best explanation."

2016–2025: Encounters continue. Data improves.
The pattern hasn't changed — but the documentation has.

May 2026: PURSUE Release 01. The files are public. The questions remain.

Credibility Assessment

Which findings are strongest — and why

- | | | |
|----|---|---|
| #1 | Western US Event (2023) | 7 federal LEOs, 4 distinct incidents, transparent object partially blocking spotlight |
| #2 | FBI Witness Consistency (2023) | 3 independent FD-302 interviews, matching descriptions, documented psychological impact |
| #3 | EMI-UAP Correlation (D62, 2020) | 11min + 27min lost-link events coincided with UAP observation; independently verifiable |
| #4 | Twining Memo Authenticity (1947) | AMC intelligence confirmed reality of phenomenon; foundational document of the era |
| #5 | Gemini 7 Crossed-Out Transcript | "Round vehicle" text edited before release; physical evidence of information management |
| #6 | Hunter Memo (1963) | State Dept internal document admitting no alien contact policy; extraordinary candor |
| #7 | USPER Statement (2025) | SECRET//NOFORN; senior intel officials witness 65-min multi-orb pursuit |

What Remains Unresolved

Questions the PURSUE release raises — but does not answer

What the data shows:

- ? The government took UAP seriously from day one, then deliberately disengaged. Why was closure the priority across multiple agencies — not just the Air Force but also the FBI, State Department, and later NASA?
- ? EMI-UAP correlation in D62 is independently verifiable signal data. Does this pattern appear in the classified reports not yet released?
- ? Contemporary witnesses (FBI 2023, USPER 2025) are as credible as any in the dataset — yet the official posture is unchanged. What would it take to change it?
- ? How many more reports exist in PURSUE Release 02+ that may fill the temporal gaps (1950s, 1970s–90s)?

What the videos don't show:

- ? None of the 15 DVIDS videos show a resolved object with identifiable structure. If the "best" publicly available footage is tiny contrast areas, what exists in the classified archives?
- ? PR38 is the most visually compelling clip — and the most likely to be a military flare. Why was the most "viral" release also the most prosaic to explain?
- ? The stigma against reporting is explicitly documented in FBI records. How many potential observations were never reported because of it?
- ? What does full-motion playback + telemetry show for the claimed kinematics (PR34 90° turns, PR28 434 kt)?

Conclusions

Three things we now know from 80 years of U.S. government UAP files

1 The Government Was Never Indifferent

From the Twining Memo to the FBI's 2,638-page file to the Hunter Memo, the U.S. government consistently treated UAP as real and significant — and then consistently closed the door. This was deliberate, not accidental. The pattern repeats across every agency and every era.

2 The Evidence Is Institutional, Not Optical

The strongest findings are not the videos — they're the documents: mission reports with structured data, FBI interviews with consistent witness accounts, State Department cables admitting policy gaps, and transcripts showing information management. The paper trail is stronger than the pixel trail.

3 PURSUE Is Only the Beginning

Release 01 covers 161 files from 6 agencies. The temporal gaps (1950s, 1970s–90s) and the existence of classified annexes suggest much more data exists. The real value of Release 01 is that it establishes the pattern — seriousness, closure, credible witnesses, official silence — that future releases can be measured against.
