

Military Mission Reports

U.S. Military UAP Encounters · 2016–2025

Analysis of PURSUE Release 01 · Track B · 41 files · 532+ OCR pages analyzed

Personal research project designed by Joe, powered by Hermes Agent and DeepSeek v4 · 2026

Geographic Coverage

41 mission reports spanning 7 theaters, 2016–2025

Arabian Gulf	2020	4 UAP in 27s · AFCENT ISR
Iraq / Syria	2022–2024	8 unique reports · 5 UAP typologies · Bouncy ball
Persian Gulf / Hormuz	2020	8 UAP · EMI correlation · UUV scan
Greece / UAE	Oct 2023	Diamond UAP · Thermal COLD · SWIR-only
Range Fouler (Navy)	2020–2023	Standardized debriefs · Round/COLD objects
Western US	2023	7 federal LEOs · 4 incidents · Transparent object
INDOPACOM / Djibouti	2023–2025	Triangle w/ blue lights · 2-hour orb · SECRET

Arabian Gulf 2020

AFCENT ISR — 4 UAP in 27 Seconds

The Incident

- AFCENT ISR aircraft observed 4 UAP in 27 seconds
- Sequence: 1 object → 2 side-by-side → 1 more
- All objects remained below the aircraft
- **D3–D7 are 5 identical copies of the same PDF**
— ingestion artifact, not 5 separate reports

Significance:

- Multi-object formations are rare in the dataset
- Short duration but high-confidence observation
- Illustrates reporting standards of early 2020s

Data Integrity Warning

~30% of packaged files in this release are duplicates — identical PDFs under different names.

Examples:

D3 = D4 = D5 = D6 = D7 (5 copies)

D23 = D27 = D33 = D35 (4 copies)

D44 = D58 (2 copies)

Always check YAML front matter `source_file` before counting reports. Multiple filenames may reference the same source PDF.

Actual unique reports: ~28 out of 41 filenames

Iraq / Syria 2022–2024

8 unique reports · 5 UAP typologies · Hotspots: Shaddadi, Ayn al-Asad

UAP Typologies

1. Missile-like — high-speed, linear trajectory
2. High-speed transient — brief appearance, extreme velocity
3. Light / plasma — luminous, variable intensity
4. Balloon — slow-moving, non-maneuvering
5. False-positive — sensor artifacts, birds, drones

Key Incident: D74 "Bouncy Ball"

- Tracked 7+ minutes at ~424 knots
- Syria, November 2023
- Most detailed kinematic record in the cluster

Notable Incidents

D28 — UAP during active weapons engagement

D32 — Plasma UAP, luminous phenomenon

D55 — Earliest report (2016), free-text narrative
radically different from later standardized forms

Reporting Evolution

2016: Free-text narrative (D55)

2020: Basic structured forms

2023–24: 20+ structured parameter fields

Temporal clustering: 7 of 8 reports in 2022–2024

Persian Gulf / Strait of Hormuz 2020

5 unique reports · 8 UAP sightings · MQ-9 Reaper platform · OKAS, Kuwait

The Strait of Hormuz Chokepoint

- All 5 reports from 482 ATKS operating from OKAS
- MQ-9 Reaper-like ISR platform
- 8 UAP sightings across Jul–Nov 2020

D62 — The EMI Case (Most Significant)

- 2 electromagnetic interference / lost-link events
- 11-minute + 27-minute signal disruptions
- EMI events occurred alongside UAP observation
- **Confirmed correlation between UAP and EMI**

D65 — Highest Density

- 3 separate UAP in a single mission

D64 — The Underwater Connection

- 2 UAPs observed in 5 minutes
- Crew specifically scanned for UUVs
(Unmanned Underwater Vehicles)
- Navy is tracking both aerial and subsurface domains
- Suggests trans-medium capability concern

Temporal Pattern

All 5 reports cluster in Jul–Nov 2020
No Persian Gulf reports before or after
this 5-month window in the dataset

Strategic Significance:

Strait of Hormuz = ~21 million barrels/day
transit point. UAP activity here has
implications beyond aviation safety.

Greece / UAE — October 2023 Wave

2 unique reports · Most detailed physical descriptions in the dataset

D25 — Greece Diamond UAP (Jan 2024)

The most detailed physical description in all 41 reports.

- Diamond-shaped object with "tail"
- Visible ONLY on SWIR (Short Wave Infrared)
 - NOT visible to the naked eye
- ~500 mph speed
- Altitude oscillations — moving up and down
- Operated by 33 SOS (AFSOC)

Key implications:

- SWIR-only visibility suggests thermal signature but no visible-light counterpart
- "Tail" feature is unique in the dataset
- AFSOC involvement = Special Operations context

D23 — UAE (Oct 2023)

- 2 UAPs observed over 41 minutes
- 40+ parameter structured reporting form
- **Thermal signature: COLD (not hot)**
 - inconsistent with conventional propulsion
- Operated by 50 ATKs (ACC)

Data Quality

- D23 has 4 copies: D23 = D27 = D33 = D35
- Different units: 50ATKS vs 33 SOS
- Different commands: ACC vs AFSOC
- Oct 2023 temporal cluster across both reports

💡 **SWIR + COLD thermal = most sensor-rich data in the entire Track B dataset**

Range Fouler Reports & Western US Event

Standardized Navy debriefs · The most significant multi-witness case

Range Fouler Reports (2020–2023)

- 5 unique standardized US Navy debrief forms
- Consistent pattern: round, COLD on IR objects making abrupt directional changes
- Multiple objects in 3 of 5 reports
- Speed range: 20 mph (D44) to 277 mph (D57)
- D38–D58 · 5 unique among 11 filenames

Common thread:

Navy pilots consistently report objects that appear round, register COLD on infrared, and make abrupt non-aerodynamic maneuvers. Standardization means easier cross-comparison.

Western US Event (2023)

The most significant multi-witness case in the dataset.

- 7 federal law enforcement agents over 2 days
- 4 distinct incidents:
 1. Orange orbs launching red orbs
 2. 12–18m fiery hovering orb
 3. "Dark Kite" moving laterally at 15–20 mph with zero detectable resistance
 4. Partially transparent kite-shaped object that blocked a spotlight beam

Credibility markers:

- Federal LEOs = trained observers
- Multiple independent witnesses
- Daytime + nighttime observations
- Physical interaction (spotlight block)

INDOPACOM & Djibouti

Triangular UAP · 2-hour orb · Blue perimeter lights · SECRET classification

D51 — Triangular UAP (Mar 2023)

- Triangular object with blue perimeter lights
- Near a national security facility
- Classic "black triangle" morphology
- INDOPACOM theater

D52 — 2-Hour Orb (Oct 2024)

- Oval / orb-shaped UAP
- Tracked for over 120 minutes
- Longest-duration event in the dataset
- Extended loiter implies intent or intelligence

D50 — INDOPACOM (Apr 2025)

- 2 UAP sightings, 10–23 seconds each
- Most recent report in the dataset

D8 — Djibouti 2025

- ~85% redacted — limited analytical value
- 2 round, white-hot objects at 240 NM/hr
- Confirms active UAP monitoring in East Africa
- Classification: SECRET//REL TO USA, FIN, SWE, FVEY, NATO
- East Africa (Gulf of Aden) = new theater

Pattern: INDOPACOM monitoring is active and ongoing — reports span 2023–2025

Key Patterns & Most Significant Incidents

Cross-cutting patterns across 41 reports · Top 6 ranked by significance

Theaters

~30%

Duplicates

Top 6 Incidents

#1 Western US	7 federal LEOs, 4 incidents, transparent object
#2 Greece Diamond	Most detailed physical description, SWIR-only
#3 2-Hour Orb	Longest duration: 120+ minutes tracked
#4 Triangle UAP	Triangular, blue lights near security facility
#5 "Bouncy Ball"	7+ min, 424 kts, Syria
#6 EMI + UAP	Lost-link events correlated with UAP, Hormuz

Cross-Cutting Patterns

Geographic hotspots	Hormuz, Shaddadi, Ayn al-Asad, Western US
Object types	Round/orb (most common), triangle, diamond, plasma
Thermal signatures	Often COLD on IR (not hot), SWIR-only visible
Behaviors	Abrupt directional changes, extended loiter (2+ hours)
Reporting evolution	2016 free-text → 2023 40+ parameter forms
EMI correlation	Lost-link events alongside UAP (D62)
Underwater concern	D64 scanned for UUVs – trans-medium tracking

Conclusions & Open Questions

What We Now Know

- ✓ EMI-UAP correlation confirmed — D62 lost-link events (11min + 27min) coincided with UAP observation
- ✓ Trans-medium concern is active — D64 scanned for UUVs alongside aerial UAP in the same mission
- ✓ COLD thermal + SWIR-only signatures (D23, D25) suggest non-conventional propulsion — not hot exhaust plumes
- ✓ Reporting standards evolved dramatically: 2016 free-text → 2023 40+ structured parameter forms
- ✓ Western US Event (7 federal LEOs, 4 incidents, transparent object) is the highest-credibility multi-witness case
- ✓ ~30% of packaged files are duplicates — actual unique reports: ~28 from 41 filenames
- ✓ Strait of Hormuz is the single most active UAP hotspot in the dataset — both in frequency and sensor detail

Open Questions

- ? What caused the D62 EMI events — unintentional interference or deliberate signal disruption?
- ? Why the Oct 2023 surge across Greece + UAE simultaneously? Coordinated or coincidence?
- ? Why ~85% redaction on Djibouti D8 (2025) when 2020-era reports are lightly redacted?
- ? What additional INDOPACOM data exists between the 2023–2025 reporting gaps?
- ? Are the "COLD" thermal signatures a sensor artifact or a genuine physical characteristic of the objects?
- ? How many more reports exist in PURSUE Releases 02+ that may fill temporal and geographic gaps?

Data Quality & Sources

Duplicate detection · Non-UAP files · Source inventory

Data Quality Notes

- ~30% of filenames are duplicates (identical PDFs)
 - ~28 unique reports from 41 filenames
- D48 (AF Report 1996) — NOT UAP-related
(risk analysis document)
- D49 (Vandenberg 2000) — NOT UAP-related
(space launch chronology)
- D20 original PDF removed from WAR.gov (404)
 - OCR text available from GitHub mirror
- D8 (Djibouti) ~85% redacted
- D55 (2016) — earliest, different format

Source Files

Geographic Clusters:

- Arabian Gulf: D3–D7 (1 unique)
- Iraq/Syria: D10–D74 (8 unique)
- Persian Gulf: D60–D65 (5 unique)
- Greece/UAE: D23–D35 (2 unique)
- Range Foulter: D38–D58 (5 unique)
- Western US, INDOPACOM, Djibouti

Deduplication Method:

Check YAML front matter `source_file` in OCR markdown. Identical `source_file` = duplicate PDF. Different filenames and folder names are ingestion artifacts.
